Professional Summary

Software engineer with over three years of building and shipping features in legal tech products, using Angular and C# / .NET. Over the last year, I have implemented AI workflows into my day-to-day development, so the repetitive work costs me less time and the harder problems get more of it. I have a seven-year background in structural engineering, two of those years as a senior engineer leading and managing teams on large infrastructure projects.

Technical Skills

Backend: C# / .NET (6-10 & Framework 4), Entity Framework (Core & 6), RESTful APIs, Python, OpenAPI, xUnit, NSubstitute.

Frontend: Angular (12–20), TypeScript, JavaScript, RxJS, Angular Material (Material 3), CSS/SASS, Tailwind, Responsive Design.

Cloud & Infrastructure: Azure (App Services, Service Bus), Google Cloud Platform (GCP), Docker, PostgreSQL, SQL Server, RabbitMQ.

DevOps & Architecture: Git, GitHub, GitHub Actions (CI/CD), Microservices/Monolithic Architecture, Process Automation, Agile/Scrum.

AI tooling: GitHub Copilot, Claude desktop app, MCP servers running in Docker Desktop, agentic coding and planning workflows

Professional Experience

Dye and Durham (London) – Software Engineer, Legal Tech Solutions

March 2023 – Present

- Coached the UX design team through setting up Claude with GitHub integration, so they can push, review and merge changes and see them live rather than mocking them up. Designs now arrive as code developers can build on, and it opens a route off Figma that cuts licence spend.
- Replaced a legacy SOAP integration with a REST pipeline inside a .NET Framework 4 codebase, adding automated status polling over Azure Service Bus to ingest and upload reports. This removed any manual fulfilment work.
- Design and build .NET REST APIs contract-first with OpenAPI, publishing the contract as the single source of truth so consumers integrate against a stable interface. Most recently an API for submitting applications to change the register with HM Land Registry, mapping our data onto the registry's required format and validation rules.
- Migrated a large monolithic UI from Angular 12 to 18 and moved it onto the Material 3 design system, clearing 100% of critical and high security vulnerabilities. Also stripped out unsupported Node packages and refactored the legacy code behind them.
- Built a standalone timekeeping microsite in Angular 18, backed by a .NET microservice with PostgreSQL, designed documentation-first with OpenAPI and built to drop cleanly into the existing monolith
- Built CI/CD pipelines in GitHub Actions with automated package publishing, and coached other teams on their build, test and release workflows.
- Run coding agents through GitHub Copilot and Claude, with MCP servers in Docker Desktop wired into Atlassian, to scope tickets and draft implementation plans I review before writing code.
- Wrote reusable Claude skills for release process work, including one that pre-populates a Jira "Request for Change" ticket. Beyond the process work, AI takes boilerplate, repetitive refactors and documentation drafts off my plate, and acts as a reasoning partner to stress-test an approach before I commit to it.

Robert Bird Group (Brisbane) – Senior Structural Engineer, Construction Engineering

July 2016 - March 2023

- Led a team of 10 engineers and drafters delivering construction phasing, sequencing and temporary retention works at Woolloongabba Underground Station, part of Cross River Rail, a £3 billion programme and the largest transport infrastructure project in Queensland. Set the priorities, held the delivery schedule and was accountable for what the team signed off.
- Built a Python desktop application that generated presentable data from tower crane structural analysis models. Output time dropped by roughly 67%, saving about £18,000 a year.
- Built a plugin in a visual programming tool that produces tower crane lifting capacity charts and radius plans for engineering drawings, automating the data output end to end. Manual drafting time halved, saving about £25,000 a year.
- Line managed and mentored 5 engineers and drafters across tower crane projects worldwide. Ran their workload, reviewed their output and supported their development, including bringing new starters up to speed on the technical work and the standards it had to meet.

Education and Qualifications

Software Engineering Immersive Bootcamp - General Assembly

Chartered Professional Engineer of Australia (CPEng) - Engineers Australia

Bachelor of Engineering (Honours Class I) with an Extended Major in Civil Engineering - The University of Queensland

Other Interests/Hobbies

Snowboarding, Skiing, Cooking, Travelling, Hiking, Football, Basketball, Beach Volleyball, Golf, Tennis and Pub Quizzes.
